SSL protocol:

You are on a page using a secure SSL connection.

You can confirm this by checking that the URL is in https, and that a padlock is present in your address bar.

Payment is fully secure on our site thanks to our partner Stripe's online payment system, a Level 1 PCI/DSS certified payment solution (the highest level of security to pay online.)

The bank card data you enter on our site is encrypted and never circulates in plain sight on the Internet. In addition, they are treated only by Stripe and are never in our possession.

When you type your card number to make your purchases on our website it is, in reality, to Stripe that you transmit them.
